

## Tuna Assist System

### Item type Terminology

This is the most complicated screen in Tuna Assist and is used by many of the screens such as the Quota Fishing and Trip Invoice, to the Stock Item for Feeding and Year Class assigned to the groups of fish intake and to the Sales of Tuna and farm reporting of weight.

**Item Type**

Details | Extra Info

Name

Report Screen Name

Report Screen name must be the same for Fishing Trip and Trip Invoice Items where many records exist

Use in Reports with GG Style

Item Category  ?

**Tuna Harvest Weight Percentages (Whole Weight)**

Nett Percentage %  Deducted % 100.00

Added Back %

Glaze Weight Addition %

**Quota Management Only**

Process Form Name

Process Form Conversion  Quota Fish Species Name  ?

### **Name**

The Item Type Name field is used to categories many of the types of data in the system. These types of data are used as a look up to many related screens and examples are:

### ***FISH STOCK (System entered do not delete)***

This is used to categories the stock item records that are used in the catch and tow and growout of the fish in the system

### ***FEED (System entered do not delete)***

This is used to categories the stock item records that are used in the feeding of the fish

### ***MAINTENANCE (System entered do not delete)***

This is used to categories the stock item records that are used in the routine operations of the farm such as motor fuel, oil, etc.

### Report Screen Name

This field is used by the Quota and Fishing part of the system and is used by the Price Grade Summary Report.

### Use in Reports with GG Style

This is used by the Summary Farm and Harvest Report by Cage Id Reports and is used in the calculation of the weight of the fish in Gilled and Gutted process form.

### Item Category

This field can sub categories the items to even further sub sets to better organize the amount of records when searching and selecting from the screen

Name	Report Screen Name
------	--------------------

### Net Percentage

Is used for the Summary Farm and Harvest Report by Cage Id Reports to work out the whole live weight of a fish

### Added Back

Is used to calculate back the net percentage and added back to derive the whole weight of the fish

### Glaze Weight Addition

Is the extra weight to add onto the fish if the fish is frozen in its process form

### Process Form Name

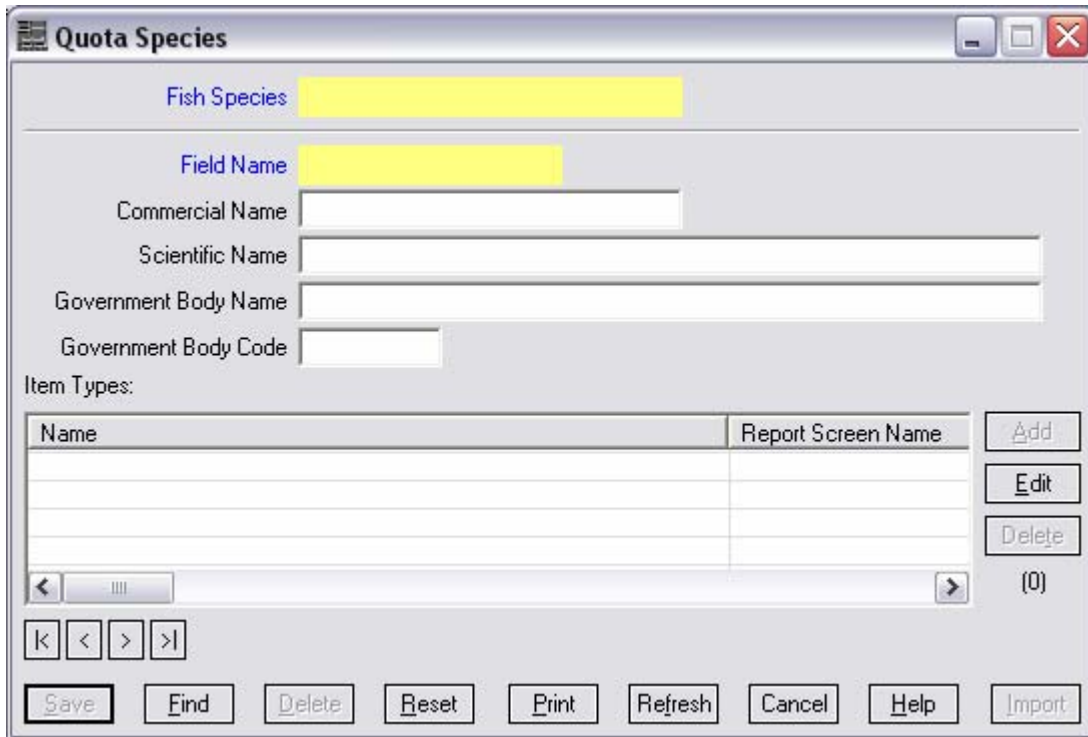

This field is used by the Quota and fishing part of the system and represents the types of process forms that a fish can be processed eg filleted, whole, head on gilled and gutted.

### Process Form Conversion

This field records the conversion calculation for the process form for example a gilled fish might required 10 % to be added back to calculate the whole fish , this field is expressed in numeric format and thus the 10 % would be represented as 1.10

### Quota fish Species Name

This field links a non quota fish species and a quota fish species to the fishing trip item and trip invoice item screens. When this field is filled in then the fish species item type is for quota.

The screenshot shows a software window titled "Quota Species". It contains several input fields and a table.

Fields:

- Fish Species (highlighted in yellow)
- Field Name (highlighted in yellow)
- Commercial Name
- Scientific Name
- Government Body Name
- Government Body Code

Item Types:
